

THE COLOR SHADING HOUSES

”COLOR IS THE POWER WHICH DIRECTLY INFLUENCES
THE SOUL”

-Badriyah Alhumaidan 7H

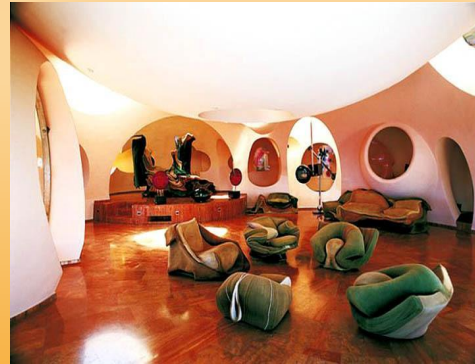

THE HOUSES

In the magical, orange planet ,Mars, houses are being sold.The houses are in the form of sea shells. They are aligned from the lightest shade of **orange** to the darkest, starting from the white color and ending with the black. These houses have different sizes going from the smallest to the largest. The small houses cost much less than the big houses. Although there is only one that is actually the biggest and the most wonderful house, we can find it in the end of the Color Shading Houses.

INSIDE THE HOUSES

Many things await inside the Color Shading Houses. All the colors inside the houses give power to the place. The houses are designed and decorated by lots of orange furniture. The smallest house has one master room, two small rooms that share one restroom, one living room, and a kitchen. The middle houses has two master rooms, two small rooms, a restroom, and a kitchen along with a living room, lastly a swimming pool indoor. The largest house has an outdoor swimming pool, three master rooms, three small rooms each with restrooms, two living rooms, one upstairs and one downstairs, and a kitchen that has a stunning view to the wonderful garden.

FACILITIES

There are still plenty of services in the colony. The facilities are very rare and majestic. Many lovely parks, markets, and pools are open. We do have venues for concerts that are beautifully made. In the park there is small flying rockets that kids can enjoy! The kids can take a little tour around the beautiful park.

The facilities are very rare looking, for example the market is built as a basket because there are groceries inside it. People in the Color Shading Houses can enjoy music in the amazing concert hall, that's why it is shaped as music instruments. The colony has many facilities, so that all people can easily and comfortably locate their needs. Most of our facilities are orange themed because they are on Mars, which is considered the orange planet.

PROTECTION SERVICE

Our protection protocols include various security precautions in case of an invasion by Martians. We have a contingency center for when disasters hit. In the colony we have a hospital where there is the capability to cope with medical emergencies. We must still be prepared for unexpected situations on Mars.

ANOTHER PROTECTION SERVICE

Another protection service in this colony is a fire station. We need to have a service that protects people from fire and emergencies. Fire services are committed to doing what is needed to rescue people that are in need. Effective rescues are focused on providing people with the necessary tools for the job appropriately equipped and saving them from danger.
